

SEA MATHS 2011

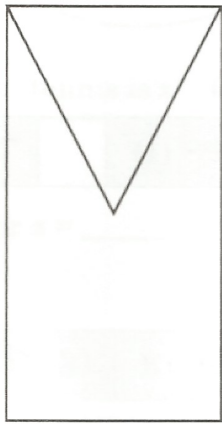

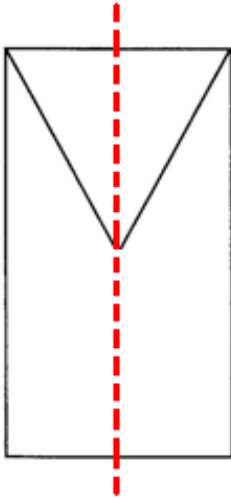

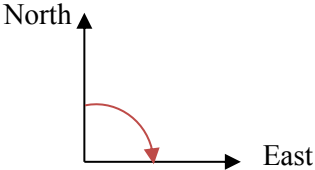

Section I

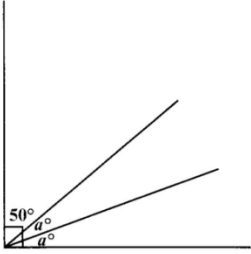

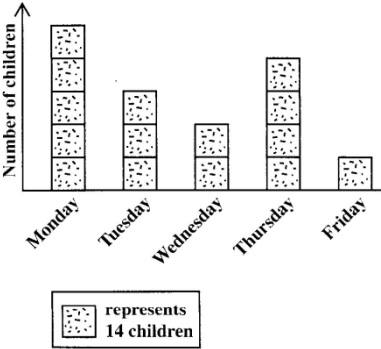

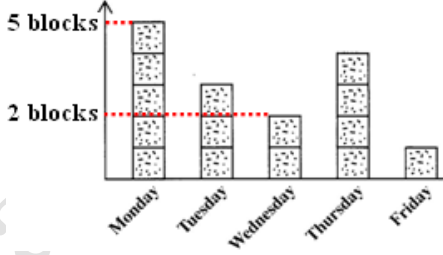

No.	TEST ITEMS	WORKING COLUMN	Do Not Write Here																	
			KC	AT	PS															
1.	Calculate: $\begin{array}{r} 1996 \\ - 684 \\ \hline \end{array}$ Answer: 1312	$\begin{array}{r} 1996 \\ - 684 \\ \hline 1312 \end{array}$																		
2.	Write in words: 12 540 Answer: Twelve thousand, five hundred and forty	<table border="1"> <thead> <tr> <th>TTh</th> <th>Th</th> <th>H</th> <th>Tens</th> <th>Units</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>2</td> <td>5</td> <td>4</td> <td>0</td> </tr> <tr> <td>Twelve thousand</td> <td>Five Hundred</td> <td colspan="3">Forty</td> </tr> </tbody> </table>	TTh	Th	H	Tens	Units	1	2	5	4	0	Twelve thousand	Five Hundred	Forty					
TTh	Th	H	Tens	Units																
1	2	5	4	0																
Twelve thousand	Five Hundred	Forty																		
3.	A starfish has 5 arms as shown below.  How many arms will 16 starfish have? Answer: 80 arms	 1 starfish has 5 arms 16 starfish will have 5×16 arms $= 80$ arms 80 =																		
4.	Write 8.74 to the NEAREST tenth. Answer: 8.7	8.74  Tenths digit The digit after is less than 5. ∴ The tenths digit remains unaltered. The digit after the tenths digit, which is 4, is now omitted Hence, $8.\underline{7}4 = 8.7$ to the nearest tenth																		

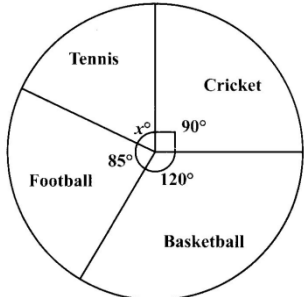

No.	TEST ITEMS	WORKING COLUMN	Do Not Write Here		
			KC	AT	PS
5.	<p>Arrange the fractions below in ASCENDING order. (Begin with the SMALLEST.)</p> $\frac{1}{4} \quad \frac{1}{12} \quad \frac{1}{3} \quad \frac{1}{6}$ <p>Answer: $\frac{1}{12}, \frac{1}{6}, \frac{1}{4}$ and $\frac{1}{3}$</p>	<p>$\frac{1}{4}, \frac{1}{12}, \frac{1}{3}$ and $\frac{1}{6}$ should all be expressed as fractions in the same denominator, so as to easily compare them.</p> <p>12 is a common multiple of 3, 4 and 6. We now express each as an equivalent fraction with denominator 12.</p> $\frac{1}{4} = \frac{1 \times 3}{4 \times 3} = \frac{3}{12}$ $\frac{1}{3} = \frac{1 \times 4}{3 \times 4} = \frac{4}{12}$ $\frac{1}{6} = \frac{1 \times 2}{6 \times 2} = \frac{2}{12}$ <p>The smallest of the four given fractions is $\frac{1}{12}$. Beginning with the smallest, we have:</p> $\frac{1}{12}, \frac{2}{12}, \frac{3}{12} \text{ and } \frac{4}{12} \text{ OR}$ $\frac{1}{12}, \frac{1}{6}, \frac{1}{4} \text{ and } \frac{1}{3} \text{ (written in original form)}$			
6.	<p>Jamie divides an orange into 12 equal slices.</p>  <p>She gives $\frac{3}{4}$ to her friend. How many slices does Jamie give to her friend?</p> <p>Answer: 9 slices</p>	<p>Number of slices = 12</p> $\frac{1}{4} \text{ of this number of slices} = 12 \div 4 = 3$ $\frac{3}{4} \text{ of the number of slices} = 3 \times 3 = 9$ <p>Therefore, the number of slices Jamie gave to her friend is 9</p> <p>OR</p> $\frac{3}{4} \times 12 = 9$

			KC	AT	PS
12.	<p>The width of the rectangular card below is 4 cm. The length, x cm, of the card is twice the width.</p>  <p>Calculate the area of the card.</p> <p>Answer: 32 cm²</p>	<p>The length of the rectangle is twice the width, therefore Length, x cm = $2 \times$ width $= 2 \times 4$ cm $= 8$ cm Area of rectangle = length \times width $= 8 \times 4$ $= 32$ cm²</p>			
13.	<p>A piece of board has the shape shown below. The perimeter of the board is 40 cm.</p>  <p>Calculate the length of the side marked d cm.</p> <p>Answer: 5 cm</p>	<p>Perimeter of board = 40 cm</p> <p>The perimeter is the sum of the lengths of all the 6 sides</p> <p>Sum of the lengths of 5 sides $= 10$ cm + 7 cm + 9 cm + 6 cm + 3 cm $= 35$ cm</p> <p>Length of sixth side = d cm $d = 40 - 35$ cm $d = 5$ cm</p>			
14.	<p>Indira awoke at quarter past seven. Draw in the hands on the clock below to show the time Indira awoke.</p> 	<p>A quarter past seven is 15 minutes past 7 o'clock. The long hand should point at 3 to indicate 15 minutes after the hour. The hour hand between 7 and 8 as shown.</p> 			

No.	TEST ITEMS	WORKING COLUMN	Do Not Write Here		
			KC	AT	PS
15.	<p>School starts at 8:45 a.m. Sally arrived half of an hour late. What time did she arrive at school?</p> <p>Answer: 9:15 a.m.</p>	<p>1 hour = 60 minutes. $\frac{1}{2}$ hour = 30 minutes. Sally is minutes late and her arrival time will be 30 minutes after 8:45. 1 $8:45 + [45+30 = 75\text{minutes} = 1\text{hr} + 15\text{ m}]$ $\begin{array}{r} :30 \\ 8:45 \\ \hline 9:15 \end{array}$ Sally arrived at 9:15 a.m.</p>			
16.	<p>Draw the line or lines of symmetry in the plane shape below.</p> 	<p>The dotted line shows the only line of symmetry. On both sides of the line of symmetry the pattern is the same.</p> 			
17.	<p>Sajani is facing North. She turns CLOCKWISE to face East. Through how many degrees has Sajani turned?</p> <p>Answer: 90 degrees</p>	 <p>Sajani made a quarter turn. 1 whole turn = 360° 1 quarter turn = $\frac{1}{4} \times 360^{\circ} = 90^{\circ}$</p>			

No.	TEST ITEMS	WORKING COLUMN	Do Not Write Here		
			KC	AT	PS
18.	<p>In the diagram below, the two angles labelled 'a' are equal. Calculate the value of 'a'.</p>  <p>Answer: $a = 20$</p>	<p>The sum of all three angles is 90 degrees. Since one angle is 50 degrees, then the sum of the two angles labelled a is</p> $= 90^{\circ} - 50^{\circ}$ $= 40^{\circ}$ <p>But both angles are the same size, a° The value of a is</p> $= 40^{\circ} \div 2$ $= 20^{\circ}$			
19.	<p>The graph below shows the number of children buying ice-cream from Monday to Friday.</p>  <p>How many MORE children bought ice-cream on Monday than on Wednesday?</p> <p>Answer: 42 children</p>	 <p>The bar for Wednesday is 2 blocks high. The bar for Monday is 5 blocks high. The difference in height = 3 blocks</p> <p>1 block represents 14 children. 3 blocks represent 3×14 children $= 42$ children</p> <p>On Monday, 42 more children bought ice-cream than on Wednesday.</p>

36.	<p>The gauge needle on a welder's gas tank moves in the direction of the arrow shown below.</p>  <p>b) How many degrees does the needle turn through from START to 8?</p> <p>Answer: 240 degrees</p> <p>c) The needle moves from 0 through 135 degrees. Where is the new position of the needle?</p> <p>Answer: Halfway between 4 and 5</p>	<p>a)</p>  <p>One complete turn of the needle = 360° Assuming the numbers 0 -11 are equally spaced around the tank, there are 12 equal intervals in an entire revolution.</p> <p>Hence the size of each angle in an interval between any two consecutive numbers = $360^{\circ} \div 12 = 30^{\circ}$ From start to 8, the needle turns through 8 intervals, each of size 30°. Total turn = $30^{\circ} \times 8 = 240^{\circ}$</p> <p>b) The needle moves through 135° from 0.</p> <p>The number of 30° turns that the needle moves through from 0 through 135 degrees</p> $= 135^{\circ} \div 30$ $= 4\frac{1}{2}$ <p>That is, halfway between the 4 and 5.</p>

37.	<p>The triangle XYZ is moved to the position of triangle PQR.</p>  <p>a) Name the movement.</p> <p>Answer: Translation</p> <p>b) Describe this movement FULLY.</p> <p>Answer: Triangle XYZ is shifted 2 units horizontally to the left and 3 units vertically downwards to triangle PQR.</p>	<p>a) Triangle XYZ is moved to triangle PQR. There is no flipping or turning. Therefore, the movement is a translation.</p> <p>b) Let us consider the point, Y and its image Q. We can describe the movement using horizontal and vertical distances as the point moves from the object position to the image position.</p>  <p>Y is shifted 2 blocks or units horizontally to the left and 3 blocks or units vertically downwards to Q. The description of the movement from Y to Q is the same as the movement of any other object point to image point.</p>
