1.	ADD: $\begin{array}{r} 847 \\ + 502 \\ \hline \end{array}$ Answer: 1 349	$\begin{array}{r} 847 \\ + 502 \\ \hline 1349 \end{array}$			
2.	DIVIDE: $4 \overline{)816}$ Answer: 204	$4 \overline{)816} \begin{array}{l} 204 \end{array}$			
3.	Write the numeral which represents: $(2 \times 10000) + (6 \times 1000) + (3 \times 10) + (7 \times 1)$ Answer: 26 037	$\begin{array}{r} 2 \times 10\,000 = 20\,000 \\ 6 \times 1\,000 = 6\,000 \\ 3 \times 10 = 30 + \\ 7 \times 1 = \underline{7} \\ \hline 26\,037 \end{array}$			
4.	What FRACTION of the whole shape is shaded?  Answer: $\frac{3}{8}$	The whole shape consists of 8 equal triangles. Three (3) are shaded. Therefore, the fraction of the shape that is shaded $= \frac{\text{Number of shaded triangles}}{\text{Total number of triangles}}$ $= \frac{3}{8}$

			KC	AT	PS															
5.	Express, $5\frac{3}{4}$ as an IMPROPER fraction. Answer: $\frac{23}{4}$	$5\frac{3}{4}$ represents 5 wholes and $\frac{3}{4}$ 5 wholes can be written as $\frac{20}{4}$ $5\frac{3}{4} = 5 + \frac{3}{4} = \frac{20}{4} + \frac{3}{4}$ $= \frac{23}{4}$																		
6.	Kerry has 120 oranges. He sells $\frac{5}{8}$ of them. How many oranges does Kerry sell? Answer: 75 oranges	Total number of oranges = 120 Fraction of oranges sold = $\frac{5}{8}$ The number of oranges sold = $\frac{5}{8} \times 120$ $= 75$																		
7.	Complete the number pattern below.  Answer: 25	We notice the pattern to be: <table border="1" data-bbox="695 1096 1203 1215"> <tr> <td>1</td> <td>4</td> <td>9</td> <td>16</td> <td><input type="text"/></td> </tr> <tr> <td>$= (1)^2$</td> <td>$= (2)^2$</td> <td>$= (3)^2$</td> <td>$= (4)^2$</td> <td>$= (5)^2$</td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td>$= 25$</td> </tr> </table>	1	4	9	16	<input type="text"/>	$= (1)^2$	$= (2)^2$	$= (3)^2$	$= (4)^2$	$= (5)^2$					$= 25$			
1	4	9	16	<input type="text"/>																
$= (1)^2$	$= (2)^2$	$= (3)^2$	$= (4)^2$	$= (5)^2$																
				$= 25$

8.	<p>Write the correct number in the circle to find the result shown.</p>  <p>Answer : 10</p>	 <p>We can work backwards to reverse this process in order to find the number. The first step is - subtract 12 $42 - 12 = 30$ The 2nd step is - divide by 3 $30 \div 3 = 10$ The number in the circle is 10.</p>			
9.	<p>Nikki has a total of \$7.00 in her piggy bank. If she only saves 25¢ coins, how many 25¢ coins does she have?</p> <p>Answer: 28 coins</p>	<p>$\\$1.00 = 100¢$ $= 4 \times 25 ¢$ One dollar is equivalent to four 25¢ coins Total that Nikki has in her piggy bank is = 7 dollars Number of 25¢ coins in 7 dollars $= (4 \times 7) = 28$ Number of 25¢ coins Nikki saved is 28</p>			
10.	<p>The shape below has sides that are all equal.</p>  <p>What is the perimeter of this shape?</p> <p>Answer: 60 cm</p>	<p>The figure has 4 sides. All sides are equal and measure 15 cm each. Therefore, the perimeter of the shape $= 15 \text{ cm} \times 4$ or $(15 + 15 + 15 + 15) \text{ cm}$ $= 60 \text{ cm}$</p>

			KC	AT	PS
11.	<p>The area of a square is 121 cm^2. Calculate the length of ONE of its sides.</p> <p>Answer: 11 cm</p>	<div style="text-align: center;">  <p>Area = 121 cm^2</p> </div> <p>Area of a square = Side \times Side $\text{side} \times \text{side} = 121$ $11 \times 11 = 121$ Length of one side = 11 cm</p>			
12.	<p>Karen's journey from Rio Claro to Port-of-Spain took 205 minutes. How many HOURS did her journey take?</p> <p>Answer: $3 \frac{5}{12}$ hours</p>	<p>Time taken in minutes = 205 60 minutes = 1 hour $1 \text{ minute} = \frac{1}{60} \text{ hour}$ $205 \text{ minutes} = \frac{205}{60} \text{ hours}$ $= 3 \frac{25}{60} \text{ hours}$, which reduces to $= 3 \frac{5}{12}$</p>			
13.	<p>Lisle has \$6.00. Pencils are sold at \$1.25 each. What is the GREATEST number of pencils that Lisle can buy?</p> <p>Answer: 4 pencils</p>	<p>The cost of each pencil = \$1.25 Lisle has \$6.00 The number of pencils Lisle can buy is found by calculating how many \$1.25 make up \$6.00</p> $\begin{aligned} \text{Number of pencils} &= \frac{\$6.00}{\$1.25} \\ &= \frac{600}{125} \\ &= \frac{24}{5} \\ &= 4 \frac{4}{5} \end{aligned}$ <p>We can discard the remainder 4 (which represents $\frac{4}{5}$ of a pencil) since Lisle cannot buy a fraction of a pencil, The greatest number of pencils that can be bought is 4.</p>			

No.	TEST ITEMS	WORKING COLUMN	Do Not Write Here		
			KC	AT	PS
14.	<p>Ron purchases 4 mangoes from Stall A and Mac purchased 5 mangoes from Stall B.</p>  <p>Who bought the mangoes at a cheaper rate?</p> <p>Answer: Ron</p>	<p>Ron bought 4 mangoes for \$3.00.</p> <p>The cost of one mango at Stall A = $\frac{\\$3.00}{4}$ = \$0.75</p> <p>Mac bought 5 mangoes for \$4.00.</p> <p>The cost of one mango at Stall B = $\frac{\\$4.00}{5}$ = \$0.80</p> <p>The mangoes are therefore less expensive at Stall A where Ron bought his mangoes. Therefore, Ron bought mangoes at a cheaper price.</p>			
15.	<p>Two containers are shown below. Which container holds more?</p>  <p>Answer: The can</p>	<p>The bottle of soft drink holds $\frac{1}{4}$ litre.</p> <p>1 litre = 1000 ml</p> <p>$\frac{1}{4}$ litre = $\frac{1000}{4}$ ml = 250 ml</p> <p>275 ml is more than 250 ml</p> <p>Therefore, the can of orange juice holds more or has a greater capacity than the bottle of soft drink.</p>

			KC	AT	PS
16.	<p>What is the name of the solid that will be formed when the net below is folded?</p>  <p>Answer: A square based pyramid</p>	<p>When the shape is folded to form a solid, all the vertices of the triangles will meet at a point. This point is now the apex of a square based pyramid. The completed solid would look like:</p> 			
17.	<p>Complete the shape below so that XY is a line of symmetry.</p> 	<p>The image is the same distance from the line of symmetry, XY, and on the opposite side of XY as the object. When folded along the line XY the object and image will match exactly with no overlap.</p> 			
18.	<p>The diagram below shows an angle labelled x°. PQ is a straight line.</p>  <p>Calculate the value of x. Answer: 32</p>	<p>The sum of the angles on a straight line = 180°. There are three angles shown and two values are given. The sum of the known angles is = $90^\circ + 58^\circ$ = 148° The remaining angle, $x^\circ = 180^\circ - 148^\circ$ Hence, $x = 32$</p>

			KC	AT	PS
21.	<p>How many pieces of string of length 0.3 m can be cut from a piece 10.5 m long?</p> <p>Answer: 35 pieces</p>	<p>Total length of string = 10.5 m The length of 1 piece of string = 0.3 m The number of 0.3 m long pieces of string that can be cut from the piece 10.5 m long</p> $= \frac{10.5}{0.3} = \frac{10.5 \times 10}{0.3 \times 10} = \frac{105}{3} = 35$			
22.	<p>Three-quarters of a number is 60. What is $\frac{1}{5}$ of the SAME number?</p> <p>Answer: 16</p>	<p>Let the rectangle below represent the whole number, divided into quarters.</p>  <p>Three quarters of the number = 60 One quarter of the number = $60 \div 3 = 20$ Four quarters or the whole number = $20 \times 4 = 80$ $\frac{1}{5}$ of the number is therefore: $\frac{1}{5} \times 80 = 80 \div 5 = 16$</p>			
23.	<p>Which of the following fractions is the LARGEST?</p> <p>$\frac{5}{8}$, $\frac{2}{3}$, $\frac{7}{12}$</p> <p>Answer: $\frac{2}{3}$</p>	<p>We can use a common denominator of 24 to express all three fractions (8, 3 and 12 are factors of 24). Converting each fraction to an equivalent form with denominator 24, we get:</p> $\frac{5}{8} = \frac{5}{8} \times \frac{3}{3} = \frac{15}{24}$ $\frac{2}{3} = \frac{2}{3} \times \frac{8}{8} = \frac{16}{24}$ $\frac{7}{12} = \frac{7}{12} \times \frac{2}{2} = \frac{14}{24}$ <p>The largest fraction is the one with the largest numerator. This is $\frac{16}{24}$ or $\frac{2}{3}$</p>

39.	<p>Study the diagram below and answer the questions that follow.</p>  <p>a) Calculate the value of q and r.</p> <p>Answer: $q = 70$ and $r = 125$</p> <p>b) Circle the term which best describes the triangle PQR.</p> <p>Equilateral Right-angled</p> <p><u>Isosceles</u> Scalene</p>	 <p>a) Angle q is one angle of triangle PQR In the triangle PQR, the sum of the given angles is: $55^\circ + 55^\circ = 110^\circ$</p> <p>The sum of all the angles in a triangle is 180°. Therefore,</p> $110^\circ + q^\circ = 180^\circ$ $q^\circ = 180^\circ - 110^\circ$ $q^\circ = 70^\circ$ <p>The value of q is 70</p> <p>The angle r is part of a straight angle at the point R. A straight angle = 180°. $55^\circ + r^\circ = 180^\circ$</p> $r^\circ = 180^\circ - 55^\circ$ $= 125^\circ$ $r = 125$ <p>b) In triangle PQR only two angles are equal. Therefore, exactly two sides are also equal. Hence, the triangle is isosceles and we circle 'Isosceles'.</p>

42.	<p>At a fair, four plastic bottles with numbers on them are lined up as shown below.</p>  <p>For every turn, a person is given three balls to knock down three bottles. The numbers are added and a toy is given for some EXACT scores as shown on the table below.</p> <table border="1" data-bbox="277 894 667 1071"> <thead> <tr> <th>Toy</th> <th>Score</th> </tr> </thead> <tbody> <tr> <td>Rabbit</td> <td>49</td> </tr> <tr> <td>Bear</td> <td>46</td> </tr> <tr> <td>Parrot</td> <td>40</td> </tr> <tr> <td>Monkey</td> <td>39</td> </tr> </tbody> </table> <p>a) Candy knocks down three bottles marked 18, 9 and 12.</p> <p>Which toy does she win?</p> <p>Answer: Monkey</p> <p>b) Candy wants to win the bear. Which THREE bottles should she knock down?</p> <p>Answer: 9, 19 and 18</p> <p>c) Candy knocks down the bottle marked 9. Which toy will she NOT be able to win?</p> <p>Answer: Rabbit</p>	Toy	Score	Rabbit	49	Bear	46	Parrot	40	Monkey	39	<p>a) Candy' scores were 18, 9 and 12. Total score = $18 + 9 + 12$ $= 39$ Candy wins a monkey according to the given table.</p> <p>b) To win a bear Candy requires a score of exactly 46. The sum of three of the four numbers 9, 19, 12 and 18 must total 46. These are 9, 19 and 18, since $9 + 19 + 18 = 46$</p> <p>c) Candy knocks down the bottle marked 9. Candy's three scores could be: 9, 19, 12 – which totals 40 and would give a parrot.</p> <p style="text-align: center;">OR</p> <p>9, 19 and 18 which totals 46 and would give a bear.</p> <p style="text-align: center;">OR</p> <p>9, 12 and 18 which totals 39 and would give a monkey.</p> <p>We can see that Candy would not be able to win a rabbit.</p>			
Toy	Score														
Rabbit	49														
Bear	46														
Parrot	40														
Monkey	39

46.	<p>Six boys ran a 100 m race. The time (in seconds) taken by each boy is shown in the graph below.</p> <p style="text-align: center;">Time taken to run 100 m</p> <table border="1"> <caption>Data from Bar Chart</caption> <thead> <tr> <th>Boys</th> <th>Time (seconds)</th> </tr> </thead> <tbody> <tr> <td>Al</td> <td>11</td> </tr> <tr> <td>Ben</td> <td>12</td> </tr> <tr> <td>Che</td> <td>14</td> </tr> <tr> <td>Don</td> <td>12</td> </tr> <tr> <td>Eze</td> <td>10</td> </tr> <tr> <td>Fred</td> <td>13</td> </tr> </tbody> </table> <p>a) Who won the race?</p> <p>Answer: Eze</p> <p>b) For which position were two boys tied?</p> <p>Answer: Third place</p> <p>c) Who was the SLOWEST runner?</p> <p>Answer: Che</p> <p>d) How long did the race last?</p> <p>Answer: 14 seconds</p> <p>e) How much longer than the first-place runner did the slowest boy take to run the race?</p> <p>Answer: 4 seconds</p>	Boys	Time (seconds)	Al	11	Ben	12	Che	14	Don	12	Eze	10	Fred	13	<p>a) The person who won the race is the one who took the shortest time. The shortest bar indicates the shortest time. The shortest bar is seen at Eze's and so, Eze won the race.</p> <p>b) If two boys tied, they would have ran the race in the same time. Both Ben and Don ran the race in the same time as their bars are equal in height. Their bars indicate that they place third (Both Eze and Al had better times). Therefore, both Ben and Don tied for third place.</p> <p>c) The slowest runner took the longest time and would correspond to the tallest bar. This corresponds to Che. Therefore, Che was the slowest runner.</p> <p>d) The race would have lasted for the length of time taken for the slowest runner to complete it. The slowest runner was Che. Che took 14 seconds. Therefore, the race lasted 14 seconds.</p> <p>e) The fastest boy, Eze, took 10 seconds. The slowest boy, Che, took 14 seconds. Therefore, the slowest runner took $(14 - 10)$ seconds = 4 seconds more than the first-place runner to run the race.</p>			
Boys	Time (seconds)																		
Al	11																		
Ben	12																		
Che	14																		
Don	12																		
Eze	10																		
Fred	13
