			KC	AT	PS
4.	<p>Write ONE of the following symbols</p> <p style="text-align: center;">$> = <$</p> <p>in the box below so that the number sentence is correct.</p> <p style="text-align: center;">$\frac{3}{4} \boxed{>} \frac{7}{12}$</p>	<p>To compare the two fractions it would be best for them to be expressed with the same denominator.</p> $\frac{3}{4} = \frac{3}{4} \times \frac{3}{3}$ $= \frac{9}{12}$ <p>\therefore We compare $\frac{9}{12}$ and $\frac{7}{12}$ by looking at their numerators. 9 is greater than 7.</p> <p>$\therefore \frac{9}{12}$ is a larger fraction than $\frac{7}{12}$.</p> <p>$\frac{9}{12} > \frac{7}{12}$ and so, $\frac{3}{4} > \frac{7}{12}$.</p>			
5.	<p>A piece of ribbon is $\frac{7}{10}$ m long.</p> <p>A piece measuring $\frac{2}{5}$ m is cut off.</p> <p>What is the length, in metres, of the remaining piece?</p> <p>Answer = $\frac{3}{10}$ m</p>	<p style="text-align: center;">Uncut ribbon $\frac{7}{10}$ m</p>  <p style="text-align: center;">Cut off $\frac{2}{5}$ m</p>  <p style="text-align: center;">Remaining piece</p>  <p>The length of the remaining piece of ribbon = The length of the uncut ribbon – The length of the piece that was cut off</p> $= \frac{7}{10} - \frac{2}{5} = \frac{7}{10} - \frac{4}{10}$ $= \frac{7-4}{10} = \frac{3}{10} \text{ m}$ <p style="text-align: center;">OR</p> $= \frac{7}{10} - \frac{2}{5} = \frac{1(7) - 2(2)}{10}$ $= \frac{7-4}{10} = \frac{3}{10} \text{ m}$			

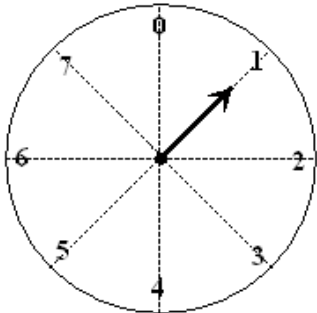

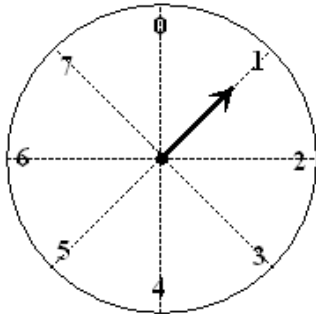

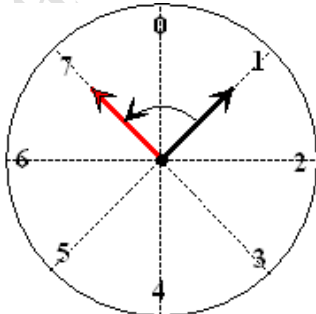

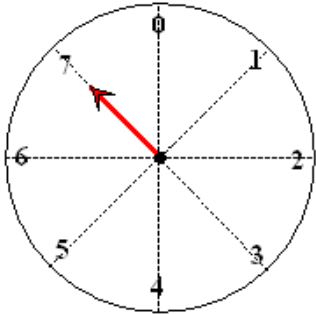

No.	TEST ITEMS	WORKING COLUMN	Do Not Write Here		
			KC	AT	PS
6.	<p>Questions 6 and 7 refer to the following information.</p> <p>In a spelling contest, Peter was given 40 words to spell. He spelt 32 words correctly.</p> <p>What fraction of the total number of words did he spell correctly?</p> <p>Answer = $\frac{4}{5}$</p>	<p>Fraction of words that are spelt correctly</p> $= \frac{\text{No. of words spelt correctly}}{\text{No. of words given}}$ $= \frac{32}{40}$ $= \frac{4}{5}$			
7.	<p>Peter must spell at least 90% of the words correctly to qualify for a consolation prize. How many words should he have spelt correctly to qualify?</p> <p>Answer = 36 or more words</p>	<p>To qualify for a prize, Peter must spell at least 90% of the words correctly.</p> $90\% \text{ of } 40 \text{ words} = \frac{90}{100} \times 40 \text{ words}$ $= 36 \text{ words}$ <p>Hence, Peter needs to spell 36 or more words correctly, from the 40 words given.</p> <p>(Peter will qualify for the consolation prize if he spells 36 or 37 or 38 or 39 or all 40 words correctly).</p>

			KC	AT	PS
11.	<p>The length of a carrot is measured below.</p>  <p>What is its length to the NEAREST centimetre?</p> <p>Answer = 5 cm</p>	<p>Line halfway between 5 cm and 6 cm.</p>  <p>The end of the carrot (indicated by the blue line) lies before the halfway mark (shown red) between 5 cm and 6 cm. Hence, the length of the carrot is 5 cm, when measured to the nearest cm.</p>			
12.	<p>A square sheet of paper has sides of 11 cm.</p> <p>What is its area?</p> <p>Answer = 121 cm²</p>	<p>11 cm</p>  <p>Area of the square sheet of paper = 11cm × 11 cm = 121 cm²</p>			
13.	<p>Shari has 4 coins on her desk. They have a total value of 50¢. The value of two coins is shown in the diagram below.</p>  <p>Write the correct value on EACH of the other 2 coins.</p> <p>Answer = One 10¢ and One 25¢ as shown in red</p> 	<p>The total value of all 4 coins is 50¢. We are shown: 1 coin with a value of 10¢ and 1 coin with a value of 5¢.</p> <p>The value of these two coins together = 10¢ + 5¢ = 15¢</p> <p>Hence, the value of the remaining two coins = 50¢ - 15¢ = 35¢</p> <p>Coins are made in the values of 1¢, 5¢, 10¢, 25¢ and 50¢. Two coins must have a total value of 35¢. Therefore, they must be one 10¢ and one 25¢.</p>

			KC	AT	PS												
14.	<p>A sales clerk is preparing a tag to show the selling price for a television.</p>  <p>Complete the tag below.</p> <table border="1" data-bbox="276 682 665 787"> <tr> <td>Cost Price</td> <td>\$1 740.00</td> </tr> <tr> <td>Discount</td> <td>\$ 174.00</td> </tr> <tr> <td>Selling Price</td> <td></td> </tr> </table> <p>Answer:</p> <table border="1" data-bbox="276 850 665 955"> <tr> <td>Cost Price</td> <td>\$1 740.00</td> </tr> <tr> <td>Discount</td> <td>\$ 174.00</td> </tr> <tr> <td>Selling Price</td> <td>\$1 566.00</td> </tr> </table>	Cost Price	\$1 740.00	Discount	\$ 174.00	Selling Price		Cost Price	\$1 740.00	Discount	\$ 174.00	Selling Price	\$1 566.00	<p>Selling price = Cost price – Discount = \$1 740 – \$ 1 74 <u> </u> <u>\$1 5 66</u></p> <p>(It is better if, \$1 740, be referred to as the ‘Marked Price’, since ‘Cost Price’ is actually the price that is paid for an item)</p>			
Cost Price	\$1 740.00																
Discount	\$ 174.00																
Selling Price																	
Cost Price	\$1 740.00																
Discount	\$ 174.00																
Selling Price	\$1 566.00																
15.	<p>A square, labelled S, and a rectangle, labelled R, are shown below. (The shapes are not drawn to scale.)</p>  <p>Both shapes have the same area. Calculate the width, w, of the rectangle R?</p> <p>Answer = 4 cm</p>	<p>The area of the square, S, is the same as the area of the rectangle, R.</p> <p>Area of the square = $10 \text{ cm} \times 10 \text{ cm}$ = 100 cm^2</p> <p>Area of the rectangle = $25 \times \text{width}$ Hence, $25 \times \text{width} = 100$</p> <p>But we know that $25 \times 4 = 100$</p> <p>Hence the width of the rectangle = 4 cm.</p>
