			KC	AT	PS																
5.	<p>Write the following numbers in descending order (starting with the GREATEST in value).</p> <p>5 173, 5 731, 5 317</p> <p>Answer: 5 731, 5 317, 5 173</p>	<p>PLACE VALUE CHART</p> <table border="1"> <thead> <tr> <th>Th</th> <th>H</th> <th>t</th> <th>o</th> </tr> </thead> <tbody> <tr> <td>5</td> <td>1</td> <td>7</td> <td>3</td> </tr> <tr> <td>5</td> <td>7</td> <td>1</td> <td>3</td> </tr> <tr> <td>5</td> <td>3</td> <td>1</td> <td>7</td> </tr> </tbody> </table> <p>Starting with the first digit on the left. All three numbers start with 5. Hence, the first digit of the numbers does not decide the greatest number.</p> <p>Therefore, the second digit counting from the left decides the largest to the smallest.</p> <p>7 is the largest of all three. 3 is the second largest of the three. 1 is the smallest of the three.</p> <p>Therefore, the numbers written from the greatest to the smallest would be 5 731, 5 317 and 5 173.</p>	Th	H	t	o	5	1	7	3	5	7	1	3	5	3	1	7			
Th	H	t	o																		
5	1	7	3																		
5	7	1	3																		
5	3	1	7																		
6.	<p>Write $\frac{39}{4}$ as a mixed number.</p> <p>Answer: $9\frac{3}{4}$</p>	<p>$\frac{39}{4}$ is 39 quarters and 4 quarters = 1 whole</p> <p>Number of wholes in 39 quarters = $39 \div 4$ = 9 wholes and 3 quarters remaining</p> <p>$\frac{39}{4} = 9\frac{3}{4}$</p>																			
7.	<p>A chocolate factory produces 250 boxes of chocolates in a day. Each box contains 30 bars. How many chocolate bars are produced in a day?</p> <p>Answer: 7 500</p>	<p>One box contains 30 chocolate bars.</p> <p>Therefore, 250 boxes will contain 250×30 chocolate bars.</p> <p>$250 \times 30 = 250 \times 10 \times 3$ $= 2500 \times 3 = 7500$</p> <p>\therefore The number of chocolate bars produced by the factory per day = 7 500.</p>																			

No.	TEST ITEMS	WORKING COLUMN	Do Not Write Here		
			KC	AT	PS
8.	<p>Complete the following number sequence.</p> <p>4, 9, 15, 22, 30, 39, _____</p> <p>Answer: 49</p> <p>4, 9, 15, 22, 30, 39, 49</p>	<p>4 $4 + 5 = 9$</p> <p>9 $9 + 6 = 15$</p> <p>15 $15 + 7 = 22$</p> <p>22 $22 + 8 = 30$</p> <p>30 $30 + 9 = 39$</p> <p>39 $39 + 10 = 49$</p> <p>49</p> <p>Therefore, the next number in the sequence is 49.</p>			
9.	<p>Write the time shown on Clock A, in digital notation, on Clock B.</p>  <p>Answer:</p>  	<p>The hour or shorter hand is between 3 and 4. This means the hour is after 3 o'clock but not yet 4 o'clock.</p> <p>The number of minutes between each number is 5.</p> <p>The minute or longer hand points to the number 8. Therefore, $8 \times 5 = 40$ minutes have passed since 3 o'clock.</p> <p>Therefore, the time is 3:40 in digital notation.</p>			
10.	<p>Convert 2.369 kilometres to metres.</p> <p>Answer: 2 369</p>	<p>1 kilometre = 1 000 metres</p> <p>Therefore, $2.369 = 2.369 \times 1\ 000$</p> <p>$= 2\ 369$ metres</p>			

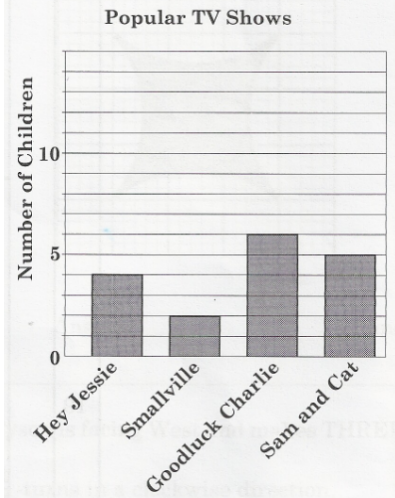

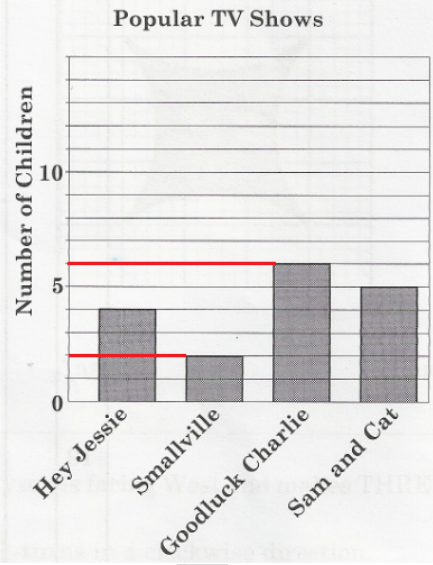

No.	TEST ITEMS	WORKING COLUMN	Do Not Write Here		
			KC	AT	PS
11.	<p>What is the length of the pencil to the NEAREST centimetre?</p>  <p>Answer: 3 cm</p>	 <p>The point of the pencil is a little to the left of the 2.5 cm mark. The other end of the pencil is about where the 5.5 cm mark appears to be. The pencil is a little bit longer than $5.5 - 3.5 = 3.0$ cm and so the length of the pencil is equal to 3 cm to the nearest centimetre.</p>			
12.	<p>Chad buys a bag of oranges for \$9.50. How much change should he get if he pays with a \$20.00 bill?</p> <p>Answer: \$10.50</p>	<p>The cost of the bag of oranges = \$9.50 The amount that is used for payment = \$20.00 Therefore, the change is $20.00 - 9.50$</p> $\begin{array}{r} 20.00 \\ - 9.50 \\ \hline 10.50 \end{array}$ <p>The change is \$10.50</p>			
13.	$\begin{array}{r} \text{kg} \quad \text{g} \\ 6 \quad 763 \\ + 3 \quad 286 \\ \hline \end{array}$ <p>Answer : _____</p> $\begin{array}{r} \text{kg} \quad \text{g} \\ 6 \quad 763 \\ + 3 \quad 286 \\ \hline 10 \quad 49 \end{array}$	$\begin{array}{r} \text{kg} \quad \text{g} \\ 6 \quad 763 \\ + 3 \quad 286 \\ \hline 10 \quad 49 \end{array}$ $\begin{array}{r} 6 + \quad 763 + \\ 3 + \quad 286 \\ \hline 1 \quad 1049 \\ \hline 10 \text{ kg} \quad = 1000 + 49 \\ \quad \quad \quad \uparrow \quad \uparrow \\ \quad \quad \quad 1 \text{ kg} \quad 49 \text{ g} \end{array}$

34.	<p>The side of each square on the following grid is 3 cm.</p>  <p>Complete EACH of the following statements.</p> <p>a) The area of ONE square on the grid is _____ cm^2.</p> <p>b) The TOTAL shaded area on the grid is _____ cm^2.</p> <p>Answer:</p> <p>a) The area of ONE square on the grid is 9 cm^2.</p> <p>b) The TOTAL shaded area on the grid is $58\frac{1}{2}$ cm^2.</p>	<p>a) Length of each square on the grid = 3 cm. Therefore, the area of one square on the grid = $(3 \times 3) \text{ cm}^2$ $= 9 \text{ cm}^2$</p> <p>b) The shaded area consists of 4 whole squares and 5 triangles. Each triangle is one half of the area of the square. Therefore, the area of one triangle = $\frac{3 \times 3}{2} \text{ cm}^2$ $= 4\frac{1}{2} \text{ cm}^2$ The shaded area comprises 4 whole squares and 5 half squares The total area of the shaded region = $(4 \times 9) + \left(5 \times 4\frac{1}{2}\right) \text{ cm}^2$ $= 36 + \left(5 \times \frac{9}{2}\right) \text{ cm}^2$ $= \left(36 + 22\frac{1}{2}\right) \text{ cm}^2$ $= 58\frac{1}{2} \text{ cm}^2$ OR We can choose to join two triangles to form a square and count the number of shaded squares in the diagram. Number of shaded squares = $6\frac{1}{2}$ or $\frac{13}{2}$ Area of one square = 9 cm^2 Area of $6\frac{1}{2}$ squares $= 9 \times 6\frac{1}{2} = 9 \times \frac{13}{2} = \frac{117}{2} = 58\frac{1}{2} \text{ cm}^2$</p>
